

## Baxter Pharmaceutical

- Located in Bloomington, IN
- 90,000 s.f. renovation
- Project Description: OMS completed an adaptive reuse/addition and renovation of the existing Columbia House Membership Service Center. The project included a 36,000 s.f. warehouse, recycling, label control and cold product storage facility. The project was considered fast-track, design build construction with early bid packages for foundations and structural steel in order to meet an aggressive five month construction schedule. The project team completed design in 60 days. Key features included coordination of manufacturing and product production lines. OMS designed low partition walls with glass tops in order to strategically control visibility throughout the facility. Several sections of wall were designed to be removable and can be lifted by forklifts to provide maximum flexibility.
