

Danville Public Library
Danville, IN

The Danville Public Library started out as a small Carnegie library at the corner of East Marion and South Indiana Streets in Danville, Indiana. Through two earlier renovation/expansion projects the library had grown to occupy nearly the entire north side of the block. OMS was tasked with taking the small remaining parcel of land and adding a 2 story 4,300 square foot addition and reading garden while maintaining minimal parking. Additionally, the existing 14,000 square foot two story library was to be renovated. The library's goal was a contemporary design addition that would complement the original building. OMS's design concept was to respect the existing building by using similar materials such as buff colored brick and adding back stone that matched the Carnegie library as key entry focal point elements. To give the addition a more modern feel, large expanses of energy efficient aluminum framed windows were added to let natural light into the library. The existing entry vestibule was also modified to match the new addition and tie the two ends of the library together. On the interior of the library new flooring was added through-out to "harmonize" the new and existing spaces. The new addition will house a new larger and more flexible program room, smaller quiet study/meeting rooms, expanded periodicals space and dedicated storage for the Indiana archives that will help protect Danville's heritage. In an effort to look to the future the library board has also invested in the design of a roof top solar panel system with an annual production of 62.53 MWh that will help to maintain their current electrical bill for several years to come.
